Daniel Lubamba

Harrisburg, NC | 980.267.7899 | Dlubamba8@gmail.com | linkedin.com/in/daniel-lubamba | https://dlubamba0.github.io/daniel-portfolio/ |

PROFESSIONAL SUMMARY

Computer Science graduate and Software Developer with professional experience debugging enterprise applications, implementing code-level fixes, developing SQL reports, and troubleshooting REST API integrations. Proficient in C++, Python, Java, JavaScript, and SQL, with hands-on experience in backend development, cloud deployment, and AI-assisted engineering workflows. Skilled in building reliable applications, diagnosing production issues, and delivering technical solutions across enterprise environments.

SKILLS

Programming Languages: C++, Python, Java, JavaScript, SQL, PowerShell

Backend & Databases: Node.js, Express.js, REST APIs, Sequelize, JWT, SQLite, SQL Server, Relational Database Design

Cloud & DevOps: AWS, GCP, Docker, Terraform, CI/CD, Google Cloud Run, Google Cloud Build, Render

Development & Testing Tools: Git, GitHub, Linux, Postman, Jest, Supertest, Docker Compose, VS Code, Cursor, Claude Code

Core Competencies: Object-Oriented Programming, Data Structures & Algorithms, API Design & Testing, Debugging, SDLC, AI-Assisted Development

Languages: English (Native), French (Native)

PROFESSIONAL EXPERIENCE

Support Developer | Financial Independence Group (FIG)
October 2026 – Present

- Develop, debug, and maintain enterprise applications, implementing code-level bug fixes to improve system functionality, performance, and reliability.
- Design and execute SQL queries and develop customized reports to extract, analyze, and deliver business-critical data.
- Test and troubleshoot REST API endpoints using Postman, analyzing HTTP requests, responses, and error codes to identify and resolve integration issues.
- Leverage Claude Code for AI-assisted development, code analysis, debugging, and SQL query optimization to streamline software development workflows.
- Diagnose and resolve production defects, data-feed mapping errors, and null-reference exceptions through root-cause analysis and systematic debugging.

PROJECTS

Basketball Tournament Management API

- Built a REST API using Node.js, Express, and Sequelize to manage teams, players, and games
- Implemented JWT authentication and role-based authorization
- Developed full CRUD functionality and deployed to production on Render
- GitHub: https://github.com/DLubamba0/Basketball-Tournament-API | Live: basketball-api-mlhy.onrender.com

Embedded Sensor Monitoring System

- Developed a C++ monitoring application that simulates real-time temperature, motor RPM, and pressure sensor readings
- Implemented warning and critical thresholds to classify system conditions as NORMAL, WARNING, or CRITICAL
- Built automated fault detection and overall system health evaluation using OOP, enums, vectors, and threshold-based logic.
- Organized the application using separate header and source files and compiled the multi-file project with g++.
- GitHub: github.com/DLubamba0/embedded-sensor-monitor

EDUCATION

Belmont Abbey College
Bachelor of Science in Computer Science | *July 2026* Belmont, NC

RELEVANT COURSEWORK

Inside of a Microprocessor • Intro to C: How Computers Really Work • Data Structures • Application Development I: Backend • Application Development II: Frontend • Modern Technologies • Programming for Everyone II • Data Ethics

ACTIVITIES

Men's Basketball Program — Belmont Abbey College
Team Captain / Student-Athlete 24-25, 25-26

- Led teammates through practices, games, and competitive play as Team Captain
- Demonstrated leadership, time management, and teamwork while balancing a full academic course load

Career Services Student Club — Belmont Abbey College

- Engaged in career development events, networking sessions, and professional workshops to strengthen communication, leadership, and job search skills while connecting with employers and industry professionals.
